Tagging Configuration in VMware vCenter Environment

Tagging in **VMware vCenter Server** allows administrators to **categorize infrastructure objects using labels**. These tags help in filtering resources, automation, policy management, and quick identification of critical workloads.

Prerequisites

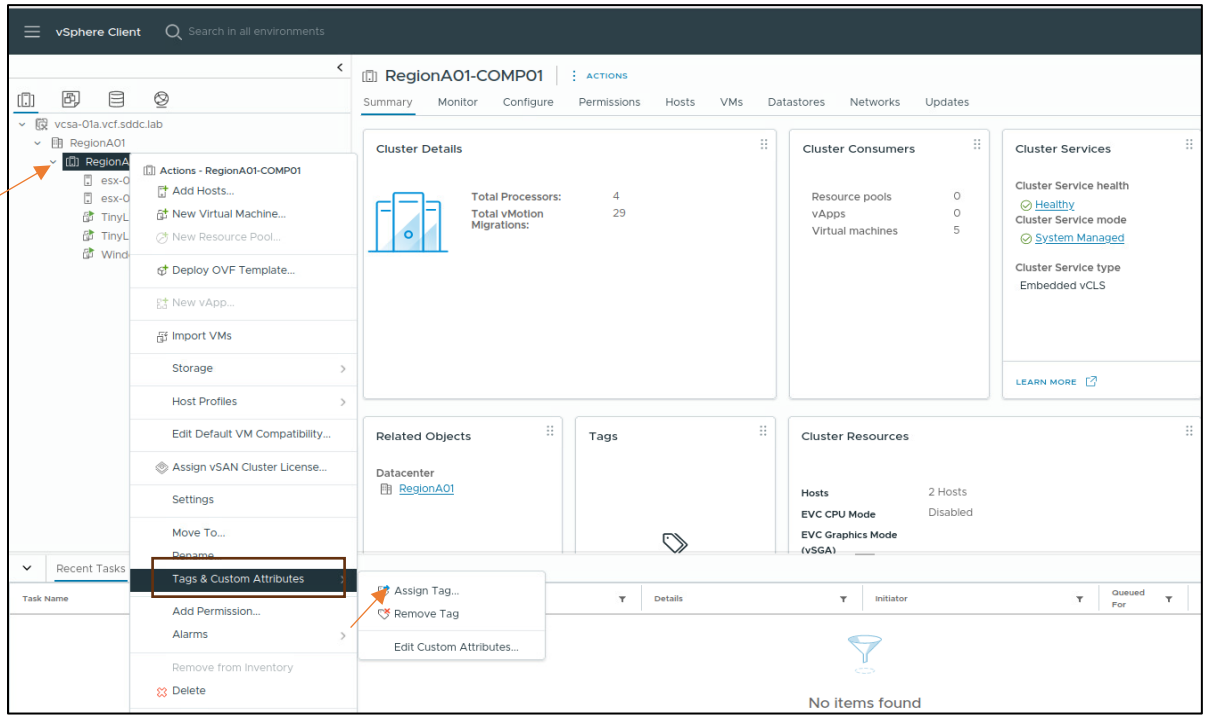
Before performing tagging operations, ensure the following:

- Administrator access to **vCenter Server**
- Required permissions to create **Tag Categories** and **Tags**

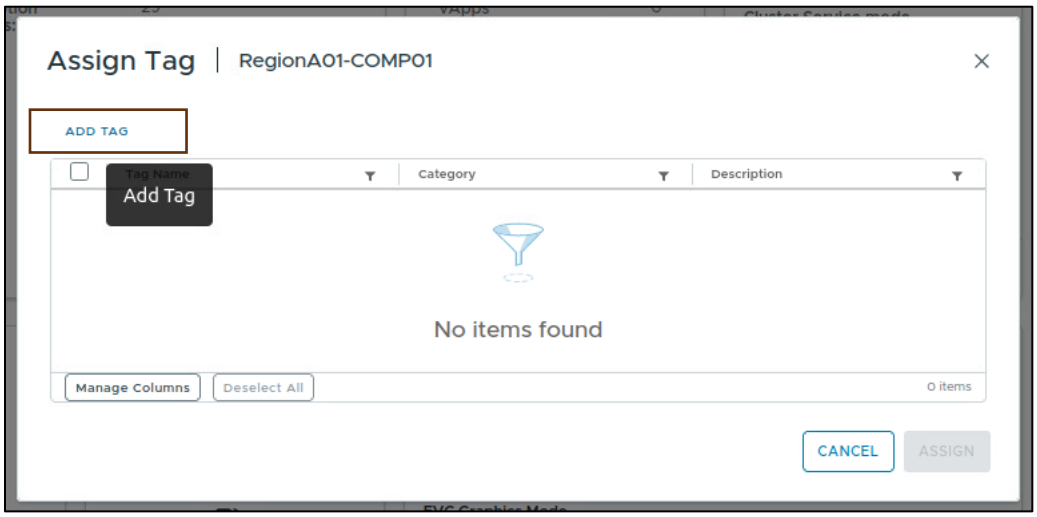
Procedure

Step 1: Access the vCenter Inventory

1. Login to the **vSphere Web Client**.
2. Navigate to the **Cluster or Object** where tagging needs to be applied.
3. Right Click on the **Cluster**.
4. Select **Tags & Custom Attributes** and Click on **Assign Tag**.

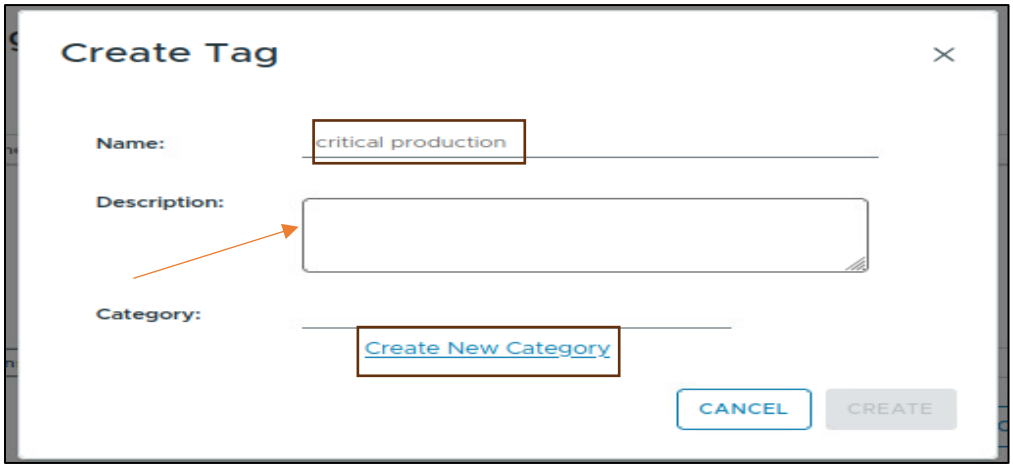


➔ Click on **ADD TAG**.



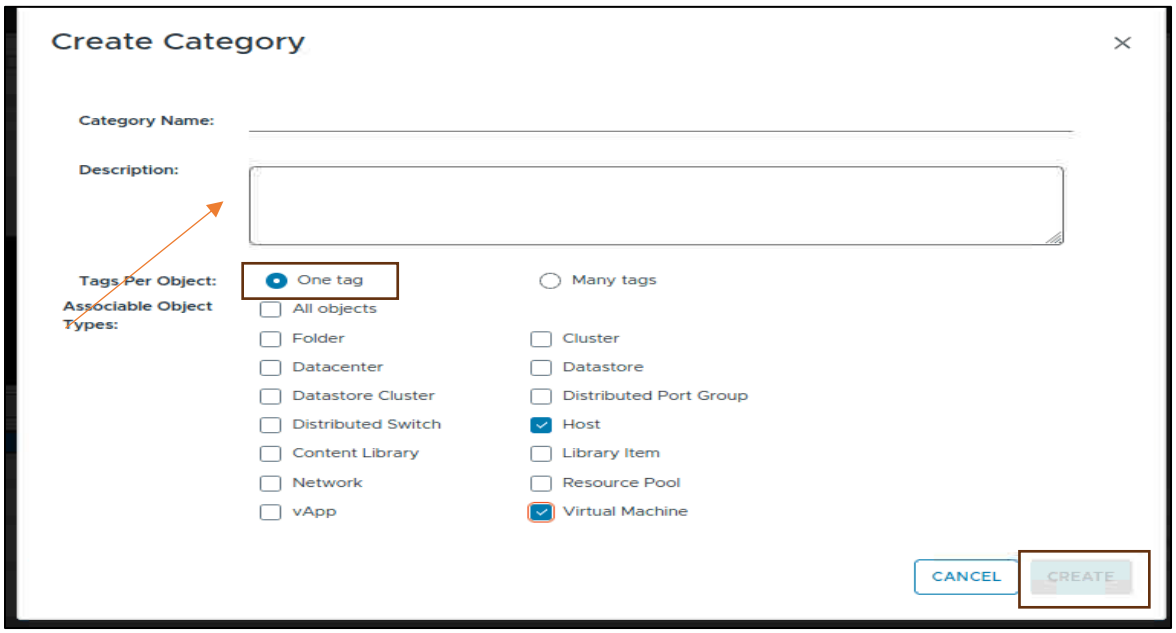
Step 2: Create a Tag

1. Navigate to the **Tags section**.
2. Click **Create Tag**.
3. Enter the following information:
    - **Tag Name**
    - **Description**
    - **Category**



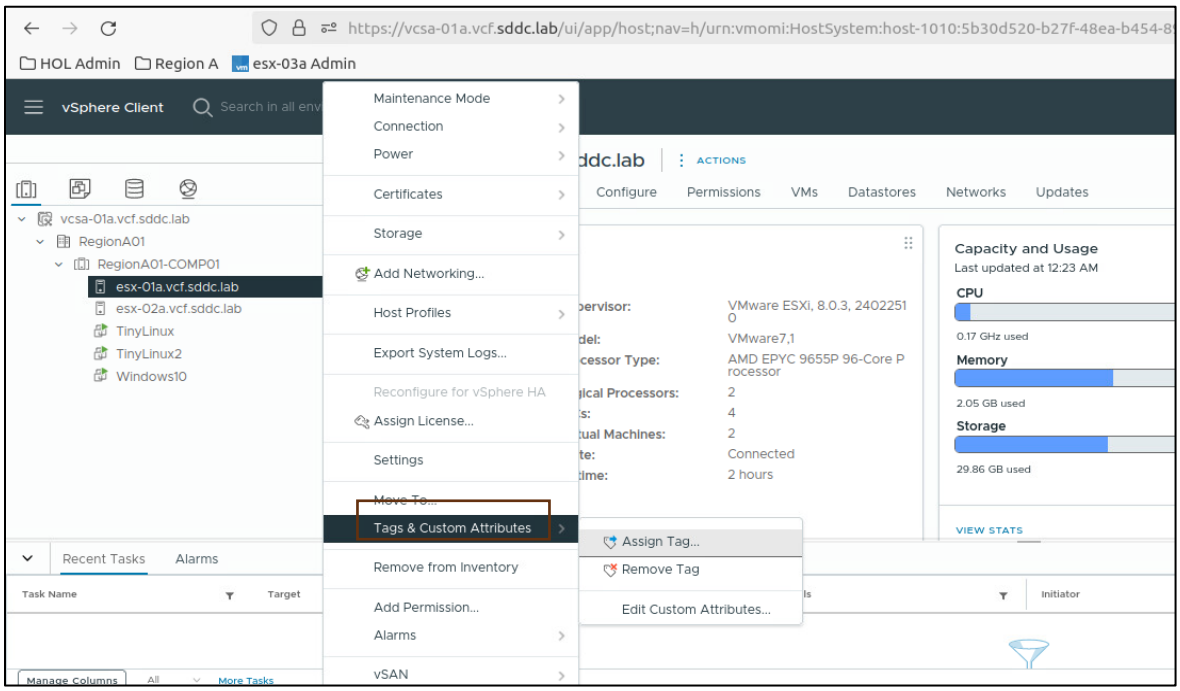
Step 3: Create a Tag Category

1. Navigate to **Menu → Tags & Custom Attributes**.
2. Select **Categories**.
3. Click **Create Category**.
4. Provide the following details:
    - **Category Name**
    - **Description**
5. Select **Cardinality**:
    - **One Tag per Object**
    - **Many Tags per Object**
6. Choose the **Associable Object Types**, Select the Option as per our requirement.
7. Click **Create**.

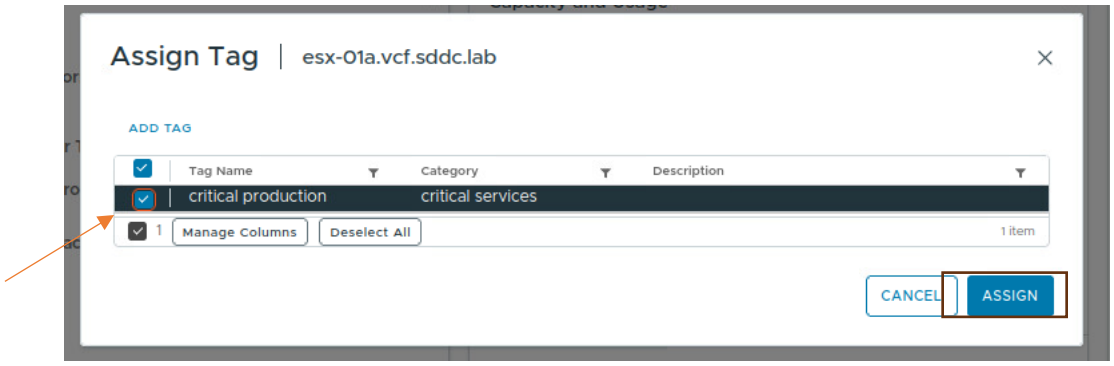


Step 4: Assign Tag to an Object

1. Navigate to the required object **(Cluster / Host / VM).**
2. Click **Actions** (or) Right Click on **Host**.
3. Select **Assign Tag**.
4. Choose the required **Tag** from the list.
5. Click **Assign**.



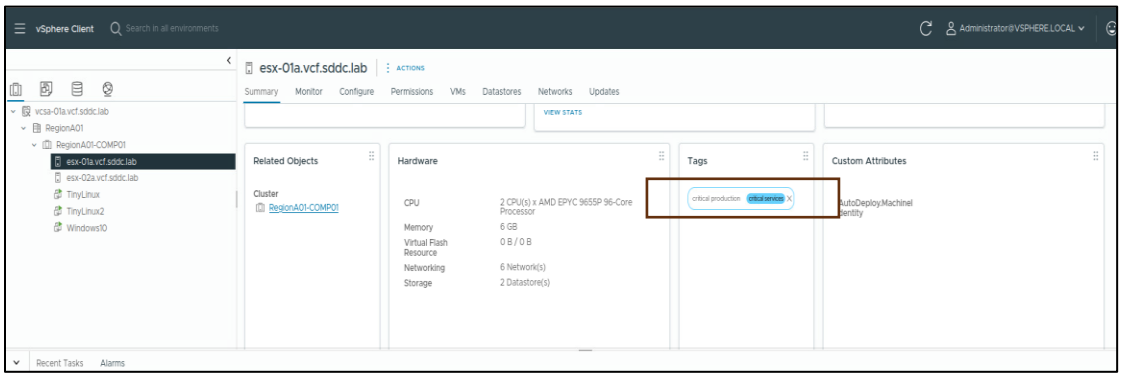
➔ Here, we can see that the created Tag and Select.



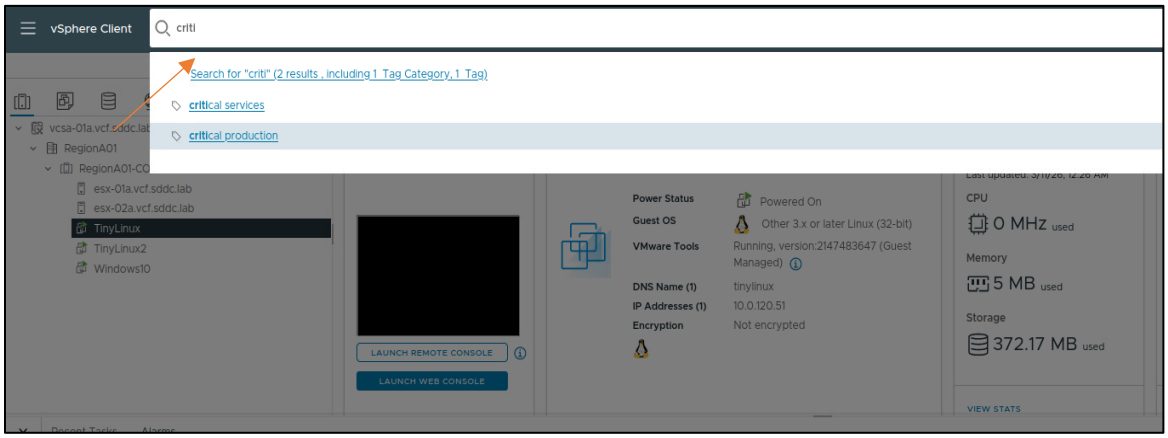
Verification

After assigning the tag:

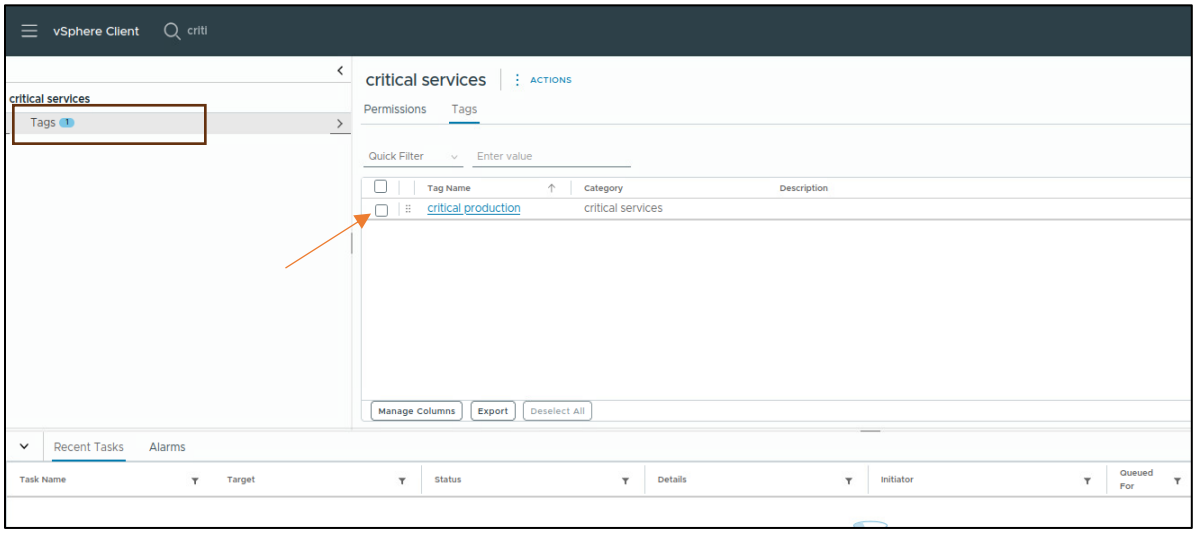
1. Open the object summary page.
2. Navigate to the **Tags section**.
3. Confirm that the assigned tag appears.

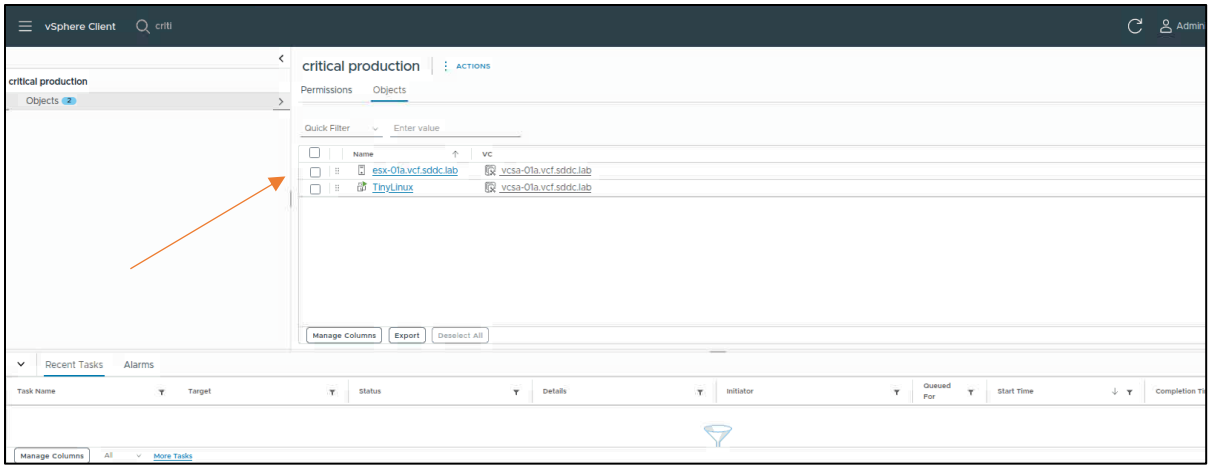


➔ We have to type the Tag name on Search Bar.



➔ **Easy Identification of Resources**

Tagging allows administrators to quickly identify infrastructure objects such as hosts, virtual machines, clusters, and datastores.




➔ Here we have to see the Permissions & Tag names.
